Managers

Jiaqi Cheng

Azure, Microsoft Fabric, Databricks, Data & AI
St Louis, Missouri, United States

Summary

As a seasoned data engineer and analyst with over 7 years of hands-on experience, I have honed my expertise in harnessing the power of data to drive strategic decision-making across diverse industries including health, finance, and education. My skill set encompasses a robust proficiency in Databricks, Microsoft Fabric, Spark, SQL, Python, R, Power BI, and Azure, enabling me to design, develop, and implement sophisticated data solutions that deliver actionable insights and enhance operational efficiency. Throughout my career, I have been committed to leveraging my technical acumen to solve complex data challenges. My experience spans from building and maintaining scalable data pipelines to conducting in-depth analyses that uncover trends and inform business strategies. My work is characterized by a meticulous attention to detail and a passion for turning data into a valuable asset. Passionate about providing data-driven insights and solutions, and familiar with state-of-the-art data architectures and technologies with rich work experience in various industries.

Experience

ARCO a Family of Construction Companies

Data Engineer

November 2024 - Present (1 year 11 months)

St Louis, MO

1 Architect comprehensive data integration solutions, extracting and ingesting critical data from diverse enterprise systems including Salesforce, UKG, Procore, Vista, Oracle, ServiceNow, SAP, and Egnyte, enabling seamless cross-platform data accessibility.

2 Develop and deploy Azure Function Apps with Python REST APIs and GraphQL to facilitate efficient data retrieval and system interoperability.

3 Develop and optimize PySpark scripts locally and on cloud platforms like Databricks and Microsoft Fabric.

- 4 Implement a robust medallion architecture in Azure ecosystem, leveraging Azure SQL Server, Azure Data Factory, Azure Databricks, Azure Synapse, and Microsoft Fabric to establish a scalable and performant data platform.
- 5 Optimize and automate ETL pipelines to enhance data processing efficiency and reliability.
- 6 Designing and refining dimensional data models to support advanced business intelligence and analytical capabilities.
- 7 Integrate Microsoft Purview with Microsoft Fabric.
- 8 Manage Azure Services and Azure Resource Group.
- 9 Establish and enforce robust data governance and security policies to ensure data integrity, compliance, and protection.
- 10 Drive adoption of industry best practices in data engineering and analytics methodologies.
- 11 Mentor and develop data engineering interns and data analysts, fostering professional growth and knowledge transfer.

BCITO

Data Warehouse Developer

March 2022 - September 2024 (2 years 7 months)

New Zealand

- 1 Successfully extracted data from multiple internal and external systems, including Salesforce, Canvas, Microsoft Dynamics, and Campaign Monitor. Utilized and maintained appropriate tokens and APIs to ensure seamless data extraction and integration.
- 2 Developed optimized star and snowflake schemas to enhance query and storage efficiency and reporting capabilities. Built and managed data warehouses to support robust data management and reporting frameworks.
- 3 Created insightful, dynamic, and interactive Power BI dashboards and ad-hoc reports, effectively managing the Power BI service to deliver actionable insights across the organization. Configured and managed row-level security (RLS) to ensure secure and tailored data access for different user groups.
- 4 Deployed and maintained Azure Data Factory pipelines for efficient data mapping and ETL processes. Led the migration of on-premise services to the Azure Cloud platform, ensuring a smooth transition and enhanced scalability.
- 5 Engaged with diverse internal and external stakeholders to provide data-driven insights that informed strategic decisions. Provided training to new employees and stakeholders, ensuring they were equipped to utilize data tools and systems effectively. Offered technical support for developers and product owners, contributing to the successful delivery of data-driven projects.

- 6 Monitored and improved data migration processes between systems, ensuring data accuracy and consistency. Conducted data cleansing activities to enhance data quality and reliability.
- 7 Led project management and deployment initiatives in an agile environment, ensuring timely and efficient delivery of solutions. Executed (CI/CD) practices using Git, GitHub, and Azure DevOps to streamline development processes and maintain high-quality standards.

Equifax

Data Analytics and Wrangling Analyst - Intermediate

September 2021 - March 2022 (7 months)

Auckland, Auckland, New Zealand

- 1 Developed and implemented Python scripts to automate ETL processes and visualize data, enhancing data accessibility and reporting efficiency.
- 2 Created SQL queries to efficiently extract and export data from IBM DB2, supporting data-driven decision-making.
- 3 Designed and maintained Tableau dashboards, providing insightful visualizations that informed business strategies.
- 4 Deployed new tools to streamline processes, ensuring automation and scalability, leading to significant improvements in operational efficiency.
- 5 Converted diverse data formats into XML files using various tools, enabling seamless data integration and exchange.
- 6 Possess expert knowledge of Comprehensive Credit Reporting (CCR) standards and processes in New Zealand, ensuring compliance and accuracy in reporting.
- 7 Engaged with internal and external stakeholders to resolve technical and data-related issues, fostering collaboration and delivering effective solutions.
- 8 Collaborated with cross-functional teams to initiate and manage new projects, driving innovation and continuous improvement.
- 9 Managed projects and provided training to new employees, ensuring successful onboarding and knowledge transfer.

Health Quality & Safety Commission New Zealand

Data Engineer

August 2020 - September 2021 (1 year 2 months)

Wellington, Wellington Region, New Zealand

- 1 Developed and maintained optimal data pipeline architecture, ensuring efficient and scalable data processing.
- 2 Assembled large, complex data sets to meet both functional and non-functional business requirements, enhancing data-driven decision-making.

- 3 Collaborated with data analysts, data scientists, and special advisors to translate business requirements into the design and implementation of process improvements, including automation, data delivery optimization, and infrastructure scalability.
- 4 Built robust infrastructure for efficient extraction, transformation, and loading (ETL) of data from diverse sources, ensuring seamless data integration.
- 5 Provided technical support to internal and external stakeholders, addressing data-related issues and supporting their data infrastructure needs.
- 6 Ensured data centralization while maintaining separation and security, adhering to best practices in data governance.
- 7 Developed data tools to assist analytics and data science teams in optimizing products, driving innovation within the industry.
- 8 Supported the enhancement of data system functionality, contributing to the continuous improvement of data operations.
- 9 Ensured compliance with data sovereignty principles, safeguarding the integrity and security of data.

EPECentre (Electric Power Engineering Centre)

Data Scientist Intern

November 2019 - February 2020 (4 months)

Christchurch, Canterbury, New Zealand

- 1 Executed comprehensive data cleaning, transformation, and statistical analysis using NumPy and pandas, ensuring data integrity and accuracy.
- 2 Developed insightful data visualizations utilizing matplotlib, seaborn, and plotly to effectively communicate data trends and patterns.
- 3 Conducted linear regression analysis with scikit-learn, contributing to predictive modeling and data-driven decision-making.
- 4 Generated large datasets through the creation of pseudo data using algorithms like fakeR, enhancing the robustness of data analysis.
- 5 Designed and implemented a 1D model to display and analyze electric traits, using Matlab to assess the impact of noise on the data.

Jilin University

Research Assistant, Bioinformatics

September 2017 - May 2019 (1 year 9 months)

Changchun, Jilin, China

- 1 Conducted thorough reviews of research papers and engaged in discussions with researchers to generate innovative solutions for complex problems.
- 2 Analyzed high-throughput sequencing data using Python within a Linux environment, ensuring accurate and efficient data processing.

3 Optimized and automated data analysis pipelines, developing protocols to standardize and streamline processes.

4 Collaborated with various stakeholders to present project progress and results, facilitating clear communication and alignment with project goals.

Jilin University

Research Assistant, Biostatistics

March 2016 - May 2017 (1 year 3 months)

Changchun, Jilin, China

1 Designed and implemented field plot experiments, ensuring alignment with experimental objectives and principles.

2 Collected, cleaned, and managed original data, maintaining high standards of data integrity.

3 Developed visualizations, including scatter plots and line charts, and conducted linear regression analysis using Excel and SPSS to derive actionable insights.

4 Authored comprehensive scientific reports and delivered presentations to stakeholders, effectively communicating research findings and recommendations.

Education

Georgia Institute of Technology

Master of Science in Analytics, Analytics · (August 2023 - August 2026)

Udacity

Nanodegree, Data Engineer · (February 2022 - May 2022)

University of Canterbury

Master's degree, Applied Data Science · (2019 - 2020)

Jilin University

Bachelor of Science - BS · (2013 - 2017)
